ParkHelp's camera-based system is a fusion of precision **vehicle detection** and advanced **license plate recognition** housed within a sleek and stylish design. This innovative solution is indispensable for those seeking to augment their exceptional parking guidance systems with **enhanced security features**.

With its unparalleled accuracy and seamless integration capabilities, this sensor is poised to elevate the **parking experience** for drivers, owners, and managers alike, ensuring efficiency and peace of mind in every parking scenario.

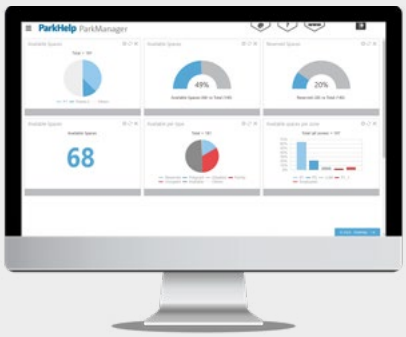

Benefits of the Camera-based system

- Elevate parking experiences with precise vehicle detection and **License Plate Recognition**, ensuring heightened accuracy.
- **Video event recordings** provide added security features, enhancing surveillance capabilities for comprehensive protection.
- Open API integrations facilitate advanced functionalities such as **dynamic pricings**, enabling tailored solutions to meet evolving needs.
- Seamless adaptation to any parking garage with easy installation and minimal disruption to its operations.
- Fully compatible and integrated with ParkManager and the comprehensive ParkHelp product lineup.

ParkManager - unifying Parking Management

ParkHelp's exclusive management software, **ParkManager**, ensures precise control over all ParkHelp Parking Guidance and Mobility systems, whether indoors or outdoors, camera-based or ultrasonic. It easily integrates with third-party systems, delivering a seamless experience and providing managers with a comprehensive set of information to make knowledgeable, data-driven decisions.

- Find vehicles by license plate number and check parking event recordings.
- Monitor all ParkHelp systems remotely.
- Obtain reports about the drivers' parking habits.
- Schedule the functioning hours of the systems.
- Customizable dashboard.
- Integrates with third party systems.
